EDUCATION

University of California, Los Angeles (UCLA)

GPA: 3.52

Bachelor of Science in Computer Science; Bachelor of Arts in Asian American Studies

Sep. 2025 – Jun. 2029

PROJECTS

Confidentiality Violations in LLMs during Compositional Task Interference

2026

- Found that LLMs systematically leak personally identifiable information and/or over-refuse during translation and LLM-as-judge evaluation tasks. Found that translation tasks leaked PII in 80.5% of responses. In the evaluation experiment, 6 of 7 models leaked the PII they were grading in their verdict rationale in 66-93% of cases.
- Accepted to three NeurIPS 2026 workshops, namely AI4GOOD, InfPriv, and NewInML.

Civilization VI Modification Development

2024 – Present

- Implement from-scratch mods for *Civilization VI*, integrating novel content with cross-compatible, multi-version support. Create and publicly publish 3 playable civilizations with self-designed features.
- Script relational data using SQL to engineer asset characteristics, supported by XML config and detailed parameter definitions. Validate and debug for a 100% crash-free player experience.

EXPERIENCE

NanoBase, K. K.

Jun. 2026 – Aug. 2026

AI Research and Engineering Intern

Osaka, Japan

- Engineered end-to-end Japanese-language LLM evaluation harness in Python on DGX Spark environment, encompassing query classification, text summarisation, RAG, and data privacy.
- Independently researched private information leakage in LLMs under compositional task interference, varied by context framing. Developed with Japanese and English datasets in a collaborative global environment.

Computation and Language for Society Lab @ UCLA

Jan. 2026 – present

Research Assistant

Los Angeles, CA

- Designed and implemented a referenceless end-to-end NLP/CV evaluation pipeline for VLM-generated image accessibility descriptions, using PyTorch and pandas to compute compatibility and usefulness metrics.
- Empirically proved axis independence, nuancing evaluations across 53 Wikipedia image-context pairs and numerically validating notions of differential needs of sighted versus blind and low-vision (BLV) Internet users.

Supervised Program for Alignment Research

Jan. 2026 – May 2026

Research Fellow

Remote

- Conduct AI governance metaresearch, formalising framework to analyze and forecast the risk of capabilities spillover. Rigorously examine historical cases (e.g. RLHF), forging strategies for differential safety progress.
- Lead interactive platform, managing deployment, UX, and automated development pipeline. Integrate with survey/contribution workflows. Contribute to framework principles, spillover metrics, uncertainty model, evals.

Drasnin Communication Archive, UCLA

Aug. 2026 – present

Student Worker, LLM Engineering

Los Angeles, CA

- Assist in the digitisation and smart data engineering of news broadcast recordings, archived for posterity. Lead the story segmentation pipeline while also assisting in transcription, speaker diarisation, and other metadata sourcing.
- Fine-tune and engineer local LLMs for automated processing, including open-source foundation models, to optimise for AV pipelining. Utilise ffmpeg and other libraries for segmentation via musical indexing, CV, etc.

Anderson School of Management, UCLA

Oct. 2026 – present

Student Worker, Instructional Design and Learning Experience

Los Angeles, CA

- Operationalize academic standards and pedagogical theory into centralised, standards-based, and state-of-the-art business and entrepreneurship education. Collaborate with Anderson faculty for accredited assurance of learning.
- Framework and implement AI and automation pipelines and standards to modernise learning experience design. Incorporate interpersonal empathy, user interface elements, and digital learning platforms for student engagement.

TECHNICAL SKILLS

Programming Languages: Python, C++, C#, Java, HTML/CSS/JavaScript/TypeScript, PHP, Swift, Ruby, Lisp

Technologies and Frameworks: PyTorch, scikit-learn, Statsmodels, Pandas, stable-baselines3, React, Node, Git, XML, SQL, Linux, Unix, GDB, GCC, POSIX, Bash, Emacs, Regex, Tailscale, Whisper, Parakeet, ffmpeg
